INDIVIDUAL, NATURAL, CONTEMPORARY

CORKLIFE stands for high qualitiy floorings. They combine the excellent characteristics of cork and give your home a cosy and relaxing touch. The floorings are as individual as your life: discover the different collections, visuals, installation solutions and additional accessories. The **CORKLIFE** and **DECOLIFE** collections are two of the most confortável and contemporary flooring solutions!

Title: Sagres Creme Matt

CORKLIFE®
robust by nature

CORK: A NATURAL PRODUCT

Cork, the regrowing bark of the cork oak, is a completely natural raw material. The life cycle of this high-value raw material begins with the first harvest of the cork oak when it reaches 25 years of age. The following extractions will be made in intervals of 9 years by hand. The tree will neither be cut nor damaged. This way, the cork oak becomes up to 200 years old and delivers a product whose characteristics cannot be produced artificially in a material until today:
Cork is thermal and sound insulating, very soft, elastic, very compressible, dimensionally stable and robust, water- and gasproof, fire-resistant, resistant to chemicals and oils and dust repellent.

Cork is pure nature!

The unique cork oak (Quercus Suber) grows from a small seedling. It reaches a height of about 10 to 12 metres and has a trunk diameter of up to 100 cm.

A GIFT FROM NATURE

FLOORINGS THAT COMBINE DESIGN, PERFORMANCE AND NATURE

ENVIRONMENT

>> **renewable raw material that regenerates after each barking**

>> **harvested without damaging or cutting down the tree**

>> **sequestration of up to 73 tonnes of CO_2 per tonne of cork produced**

It all begins in the cork oak forests of the Mediterranean regions, which have long been more than just a supplier of the renewable raw material cork. Carefully cultivated, these forests are highly effective carbon sinks. They protect the soil from desertification, regulate the water balance and are habitats for numerous animal and plant species.

ECONOMY

>> **Economic engine for rural regions**

>> **Highest paid work in agriculture worldwide**

>> **Harvest by hand**

The cork oak forests are of central importance for the development of rural areas in the Mediterranean countries.

They create jobs in cork harvesting and processing. Harvesting cork is a job that requires experience and is highly demanding, as damage to the trees during harvesting must be avoided.

SOCIAL SIGNIFICANCE

>> Migration is avoided

The cork harvest is more than just a job. It is a manual work that requires profound knowledge of cork oak forests and the extraction technique. It takes years of experience and knowledge, passed on in families from generation to generation, to be able to meet these requirements.

The cork harvest is a regular, cyclical process that contributes to the sedentariness of people in regions threatened by emigration.

ROBUST SOFTNESS IN THE ENDURANCE TEST

CORKLIFE MAKES YOUR HOME TO A PERFECT LIVING SPACE

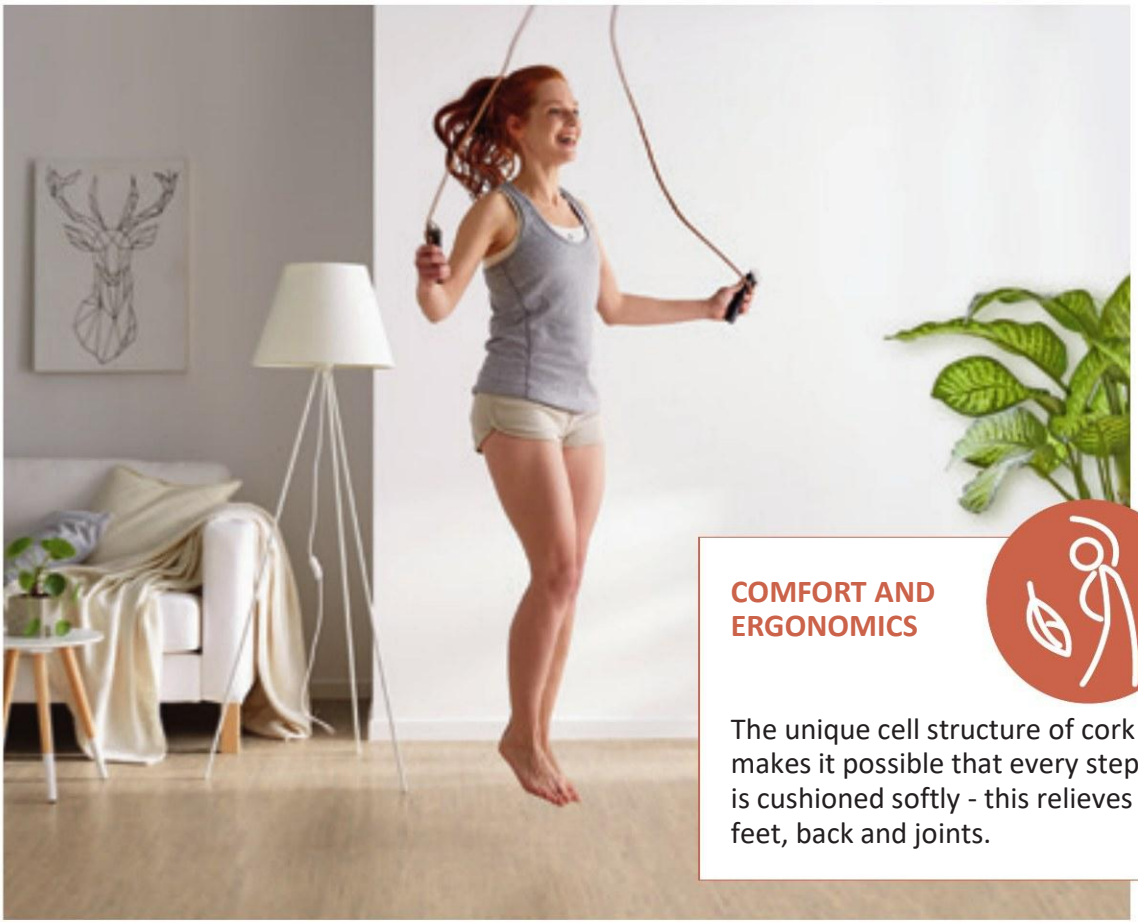

SILENCE AND RELAXATION

Cork consists of millions of cells which work as small sound insulators and reduce all noises. Due to this, impact and step sound within rooms are reduced enormously.

HYGIENE AND HEALTH

CORKLIFE provides a healthy living environment. Special surfaces prevent that dirt, dust, germs or fungal spores infest the floors. This is not only important for people with allergies.

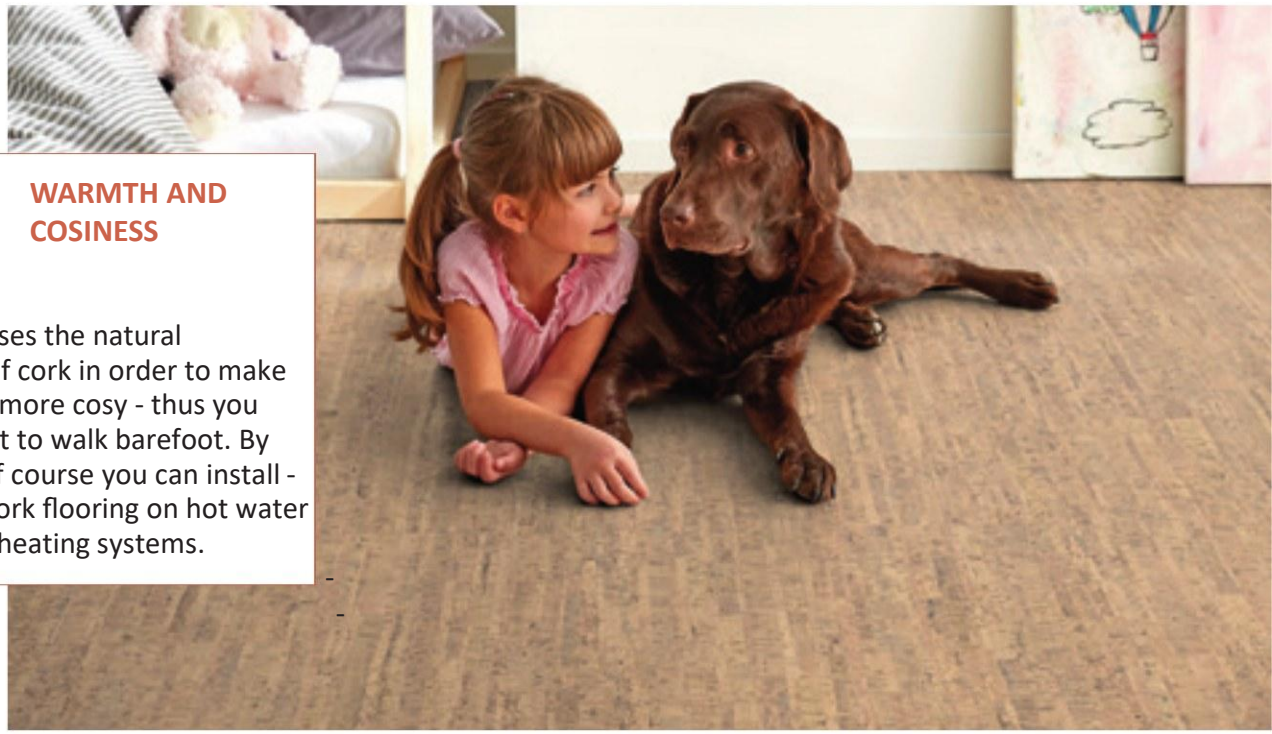

COMFORT AND ERGONOMICS

The unique cell structure of cork makes it possible that every step is cushioned softly - this relieves feet, back and joints.

WARMTH AND COSINESS

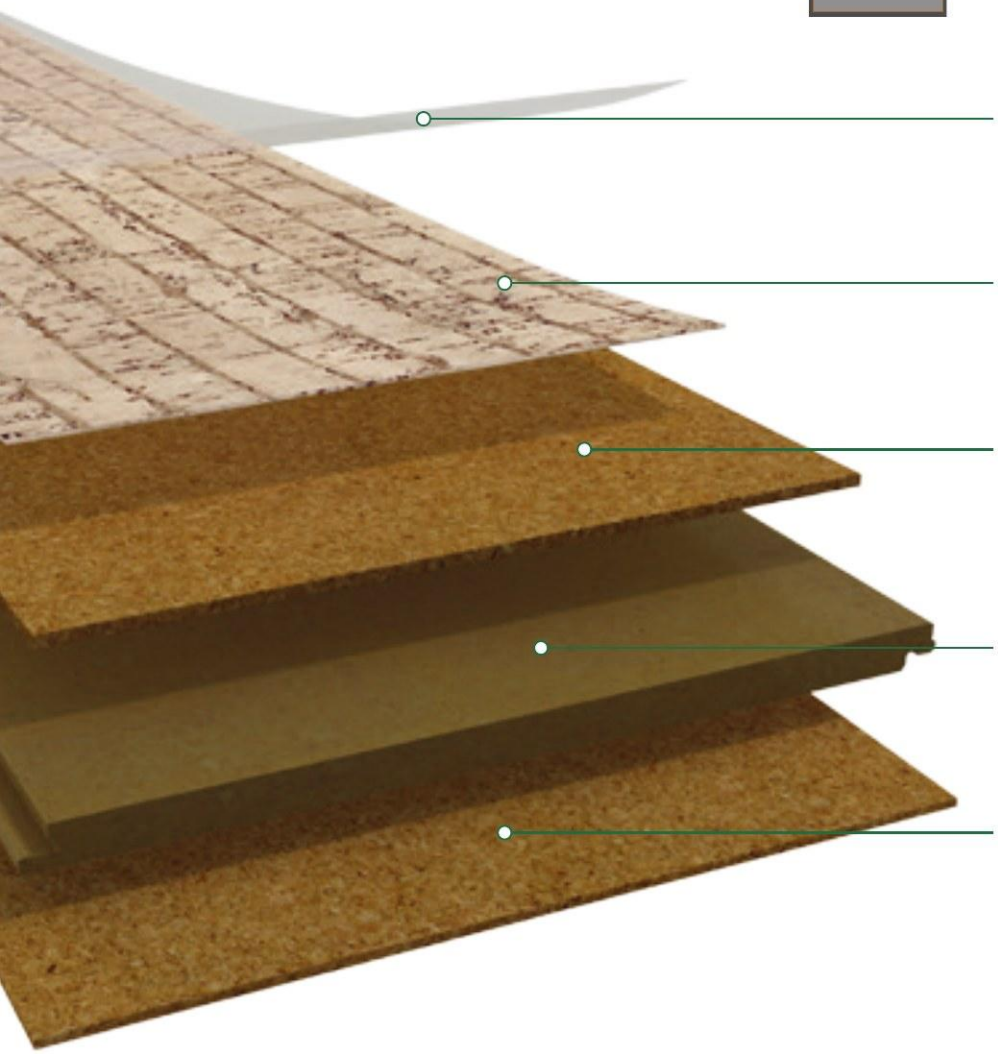

CORKLIFE uses the natural insulation of cork in order to make your home more cosy - thus you always want to walk barefoot. By the way - of course you can install - CORKLIFE cork flooring on hot water underfloor heating systems.

CORKLIFE STUDIOSTYLE

CORK FLOORING - FOR FLOATING, GLUELESS INSTALLATION

Simple, good-looking and of high quality – CORKLIFE STUDIOSTYLE is the perfect floor for those who like things uncomplicated. Floors for living with family and friends. The installation is as easy as the handling of the floor itself.
Discover CORKLIFE STUDIOSTYLE as the basis for a relaxed, carefree living experience.

CORKLIFE FREESTYLE

CORK FLOORING - FOR FLOATING, GLUELESS INSTALLATION

A floor for true individualists, because it leaves no design wishes unfulfilled. CORKLIFE FREESTYLE - a new technology makes it possible to print the decors directly onto the cork veneer, whereby the surfaces of the floor elements do neither have to be flat nor smooth. The cork can perfectly reproduce the three-dimensionality of the respective natural material images. The result is a floor covering on which colours, nuances, grains and relief-like structures of natural materials such as wood are reproduced in a previously unknown level of detail - all according to personal wishes and taste.

CORKLIFE CORKPARQUET

CORKPARQUET FOR GLUE-DOWN INSTALLATION

Comfortable, warm, elastic and significantly sound-absorbing - CORKLIFE CORKPARQUET is the classic cork parquet for glue down installation on dry, flat surfaces. It offers all the advantages of a cork flooring - suitable for use in the entire living area.

Depending on the flooring product and personal taste, the surfaces of CORKLIFE CORKPARQUET are natural, waxed or pre-sealed and resist external impacts such as dirt, moisture and other extreme impacts after final sealing by the customer. Of course, CORKLIFE CORKPARQUET can also be used on hot water underfloor heating systems.

CORKPARQUET – NATURAL, WAXED OR VARNISHED

CORKPARQUET-SURFACE
natural, waxed or prevarnished

DECORATIVE CORK VENEER
naturally beautiful designs
